

AUTONOMY

The new solution be
people with reduced
mobility.

ARCOROC
EVERYDAY PROOF

AUTONOMY

A solution for the increasingly dependent population

European population aged over 80 will double between 2018 and 2070 (12.6% of the EU population in 2070)

We will see an exponential increase in population with a loss of autonomy from 2030 onwards.

In Europe circa 20% of the population is over 65 years of age.

AUTONOMY

Designer Testimonial

Grégory Balle
Designer

“This range is the result of discussions with healthcare professionals. We designed each piece by identifying specific needs in order to guarantee a certain level of independence for the user. Full-scale tests enabled us to design the ideal solution to meet the complex needs raised.”

“For visually impaired patients,
it's great to have a plate with
a coloured fillet to make
the food visible”

*“Encouraging autonomy by
always paying attention
to self-esteem”*

“Lack of dexterity”

*“Lack of precision
in the gesture”*

Product Manager Testimonial

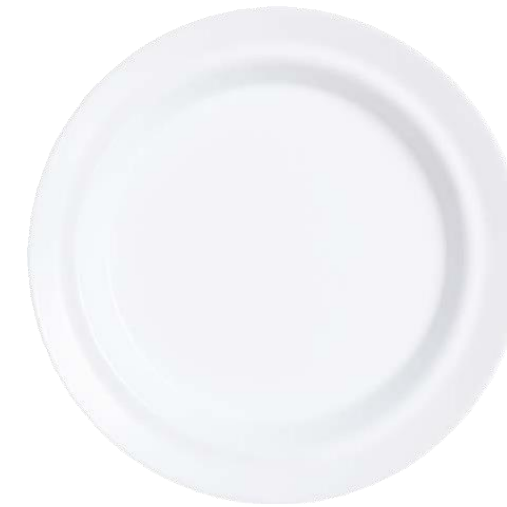

Laure Delannoy
Product Manager Tableware

“The Autonomy project is first and foremost a human experience that has taught us to work and think differently. It's a team effort, with enriching collaborations with healthcare professionals and residents. We're proud to present this functional concept, specifically adapted for meals and designed to meet the day-to-day needs of people who are losing their independence.”

“Need to make swallowing easier”

AUTONOMY

A concept combining glassware, plain and coloured dinnerware.

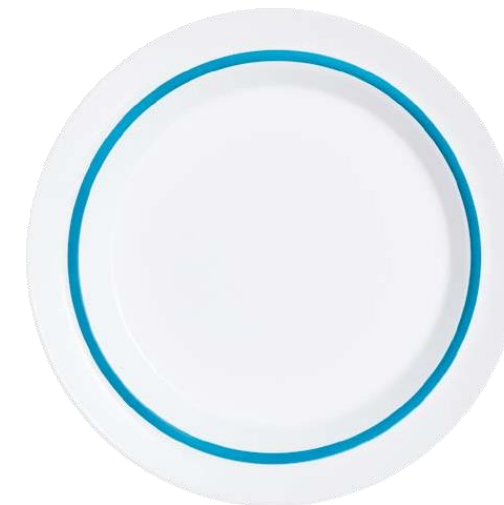

AUTONOMY

Adapted and functional

Steep slope to keep food in the well

Rim to keep the thumb out of the food and for a better grip

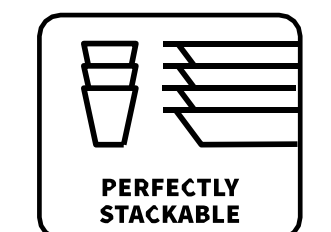

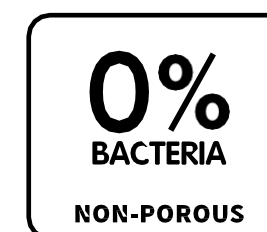

Optimised depth to avoid residents raising their cutlery too much and therefore their arms

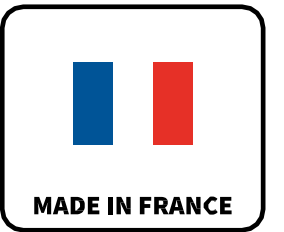

Compatible with TempRite lid

Compatible with 240 Bulling lid

AUTONOMY

Adapted and functional concept

AUTONOMY

A concept already tested and approved

Svetlana Gottfried
Care Manager

"The deep plate, and especially the deeper rim, made meal times better, especially for the patients with dementia. The red or blue rim is perfectly visible and is great for our residents to recognize. Colour is important when you work or interact with elderly people."

Saule Müller
Logistic tableware Manager

"I was positively surprised about the cleaning of the plates as they have a very deep rim. But the material of the autonomy plate was perfect to use in the dishwasher and came out 100% clean."

Louise Vermelle
Ergotherapist

"Overall, the trial was very conclusive, both in terms of ease of use and acceptance by residents."

The tumbler "Pretty and graceful".

The plates "Look like a soup plate";

"I don't mind eating from a soup plate"; the plates are very light and pleasant to handle."

A much-appreciated tumbler:

"Perfect top opening, encompasses the nose well and avoids hyperextending the head to drink."

"Efficient."

*A concept that makes eating easier:
"The tumblers reduced misdirection's during the trials"
"The plates allow residents to lean on the rim, which facilitates eating and reduces the need for external aid"
"We were very satisfied with the trials, which were conclusive for everyone"*
